

## Eastern Ontario Crop Diagnostic Day 2005 – July 19<sup>th</sup>

The Eastern Ontario Crop Diagnostic Day is a co-operative effort between the Ontario Ministry of Agriculture, Food and Rural Affairs, the Eastern Ontario Crop Advisory Committee and Kemptville College. The Eastern Ontario Crop Diagnostic Day is an annual event held in mid-July, designed specifically to improve the problem solving skills of seed, fertilizer and chemical industry personnel, agricultural consultants and farm managers. Certified Crop Advisor credits are available for most sessions.

The Eastern Ontario Crop Diagnostic Day provides growers and agri-business personnel with “hands-on” learning experiences to assist in the correct identification and treatment of crop problems common to eastern Ontario. The program provides a “real-world”

environment where agriculturists can hone their crop trouble-shooting skills and evaluate new and alternative management strategies.

Popular topics include Weed Identification, Herbicide Injury in Corn & Soybeans, Fertility Diagnostics, Planter Problems, Spray Drift Management, Cereal, Soybean and Corn Diseases and Insects, Forage Establishment and Management and Soil Compaction and Management, Precision Agriculture, Scouting Tips, Soybean Aphids, Soybean Rust, Diagnostic Challenge and Spray Coverage for Fungicides/Insecticides

Participant comments:

“Topics and speakers were all excellent”.

“Well presented and interesting topics.”

“Excellent cross section of what can be grown and specific problems in Eastern Ontario”
