

Canada's Outdoor Farm Show 2003

Canada's Outdoor Farm Show offers producers an opportunity to learn about innovative advances in farm equipment, agriculture technology and ag-sector initiatives. Each year, OSCIA and OMAFRA Crop Technology staff has prepared an interactive demonstration site for the past twelve years.

The objective of the display in 2005 was to highlight and showcase Beneficial Management Practices that can be used on the farm, their economic potential and possible environmental impacts. Both the field plots and the tent display were designed to attract many growers over the three day show. Interactive demonstrations on cover crops, direct seeded tree lot, soybean seeding rates and row spacing, tillage equipment displays, manure side dressed into corn, leaf hopper resistant varieties of Alfalfa, N calculator, Greenhouse Gas, and weed, insect and plant disease displays which promoted producer discussion with the Crop Tech specialists who were available for questions.

Next year's show will be held in Woodstock, Ontario on September 12, 13, & 14, 2006. There will be new field demonstrations and information displays so come and enjoy the show where "Farmers Meet".
